

Theoretical foundations

Michel Foucault (1926-1984)

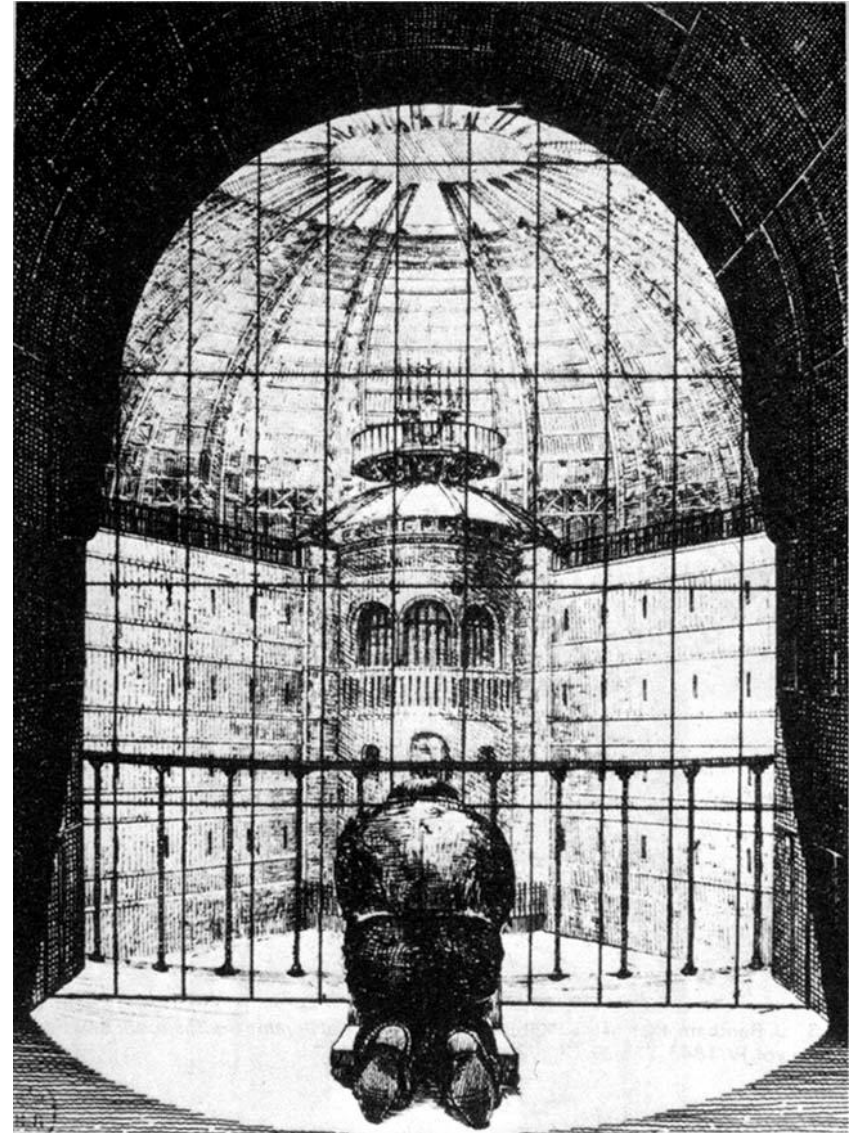

Discursive Formations

- Epistemes = the structures of thought that epitomise the thinking of an age
- A particular episteme gives rise to particular forms of knowledge. Foucault calls these forms of knowledge discourses = regimes of truth
- Most societies function according to an order of discourse, i.e. a complex of ideas, practices, institutions and beliefs that collectively characterise any given historical period.

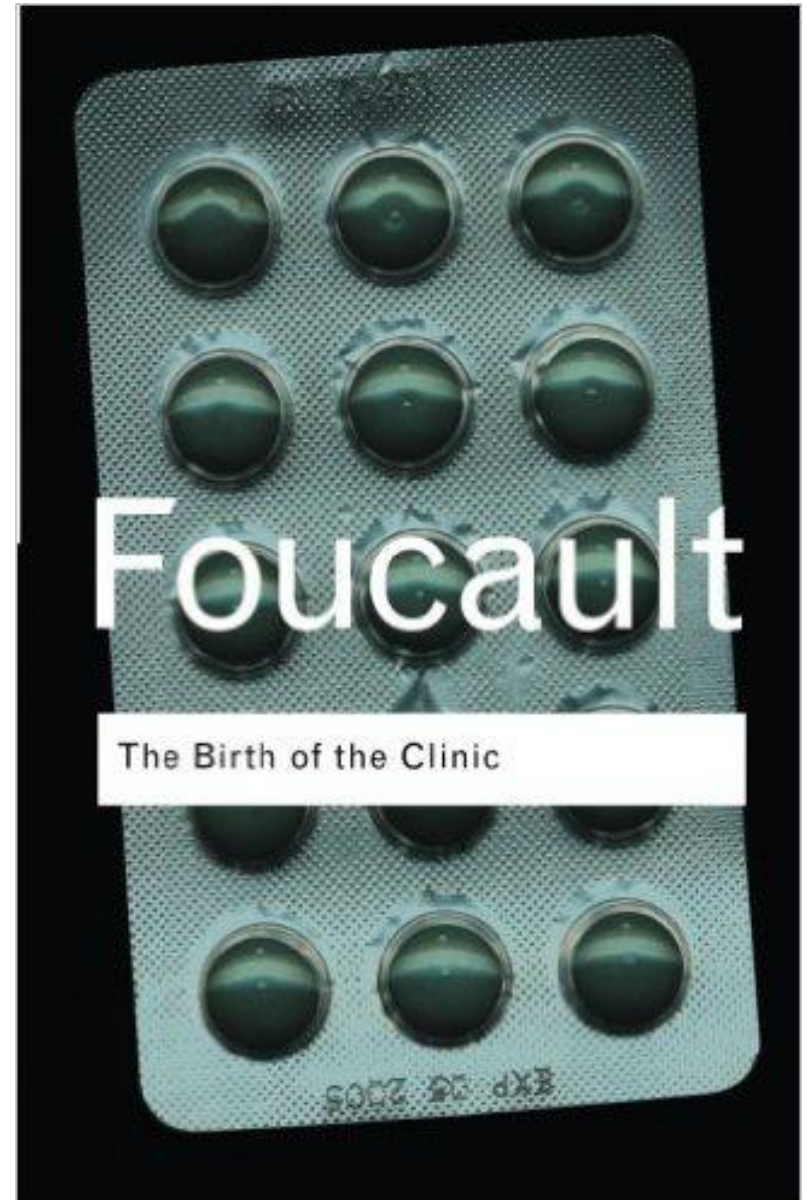

Knowledge is power

The preliminary sketch for Foucault's analytics of power first emerges in what many regard to be Foucault's seminal text, *Discipline and Punish* (1977). Here, Foucault traces the birth of the modern prison and the gradual transition from punitive methods of punishment aimed solely at the body (torture, public executions, etc) to forms of non-coercive discipline aimed at using the body as an instrument with which to enact moral training, that is corrective techniques aimed at transforming the soul of the subject.

Docile Bodies

Consequently, one sees a proliferation of new non-coercive disciplines, discreet forms of surveillance, and professional 'technicians of behaviour', that is 'engineers of conduct' (teachers, doctors, nurses, psychiatrists), charged with rendering particular groups of persons more knowable, in the hope that this knowledge can then be used to produce bodies and souls that are both docile and useful.

Governmentality

- During the eighteenth and nineteenth centuries, when most Western nation-states experienced extraordinary increases in the size of urban populations, a phenomenon that represented all kinds of new economic and socio-political probabilities and uncertainties.
- Emergence of political rationalities largely concerned with how to increase a nation's wealth, how to maintain a healthy and prosperous populace, how to stimulate birth-rates, how to effect certain ways of behaving and thinking
- 'Government' is expanded beyond the traditional practices of the state to include an ensemble of voluntary, statutory, and professional agencies (e.g. the 'psy' disciplines, social welfare, education, medicine, religion, recreational organisations, etc.)
- Government by numbers (render social phenomena intelligible, measurable and visible; a process of inscribing both their object of study and the participating subjects with calculable subjectivities)

Cultural Governance

- Cultural regulation is especially concerned with the relations between culture, government, and power
- The way in which cultural resources are managed either by the state or by other technologies of government for reasons of state.
- Cultural governance is thus about the management of culture through the formulation of cultural policy. Hence the foregrounding of so-called 'cultural policy studies'.
- The history of modern cultural governance can be traced back to the emergence of Victorian rational recreation.
- Culture is better understood as 'a reformer's science'.
- There emerges a professional class of cultural technicians whose express purpose is to embrace culture as a means of social management.

Big Brother Today

- Closed-circuit television
- Interception of electronically transmitted information
- Social network analysis
- Biometrics surveillance
- Aerial and satellite surveillance
- Human operatives and informants
- Identity card system
- Tagging
- Bugging
- Market research
- Inverse surveillance

Does Facebook record conversations when it identifies the things I'm listening to or watching?

No, we don't record your conversations. If you choose to turn on this feature, we'll only use your microphone to [identify the things you're listening to](#) or watching based on the music and TV matches we're able to identify. If this feature is turned on, it's only active when you're writing a status update.

Note: This optional feature is only available in the US right now.

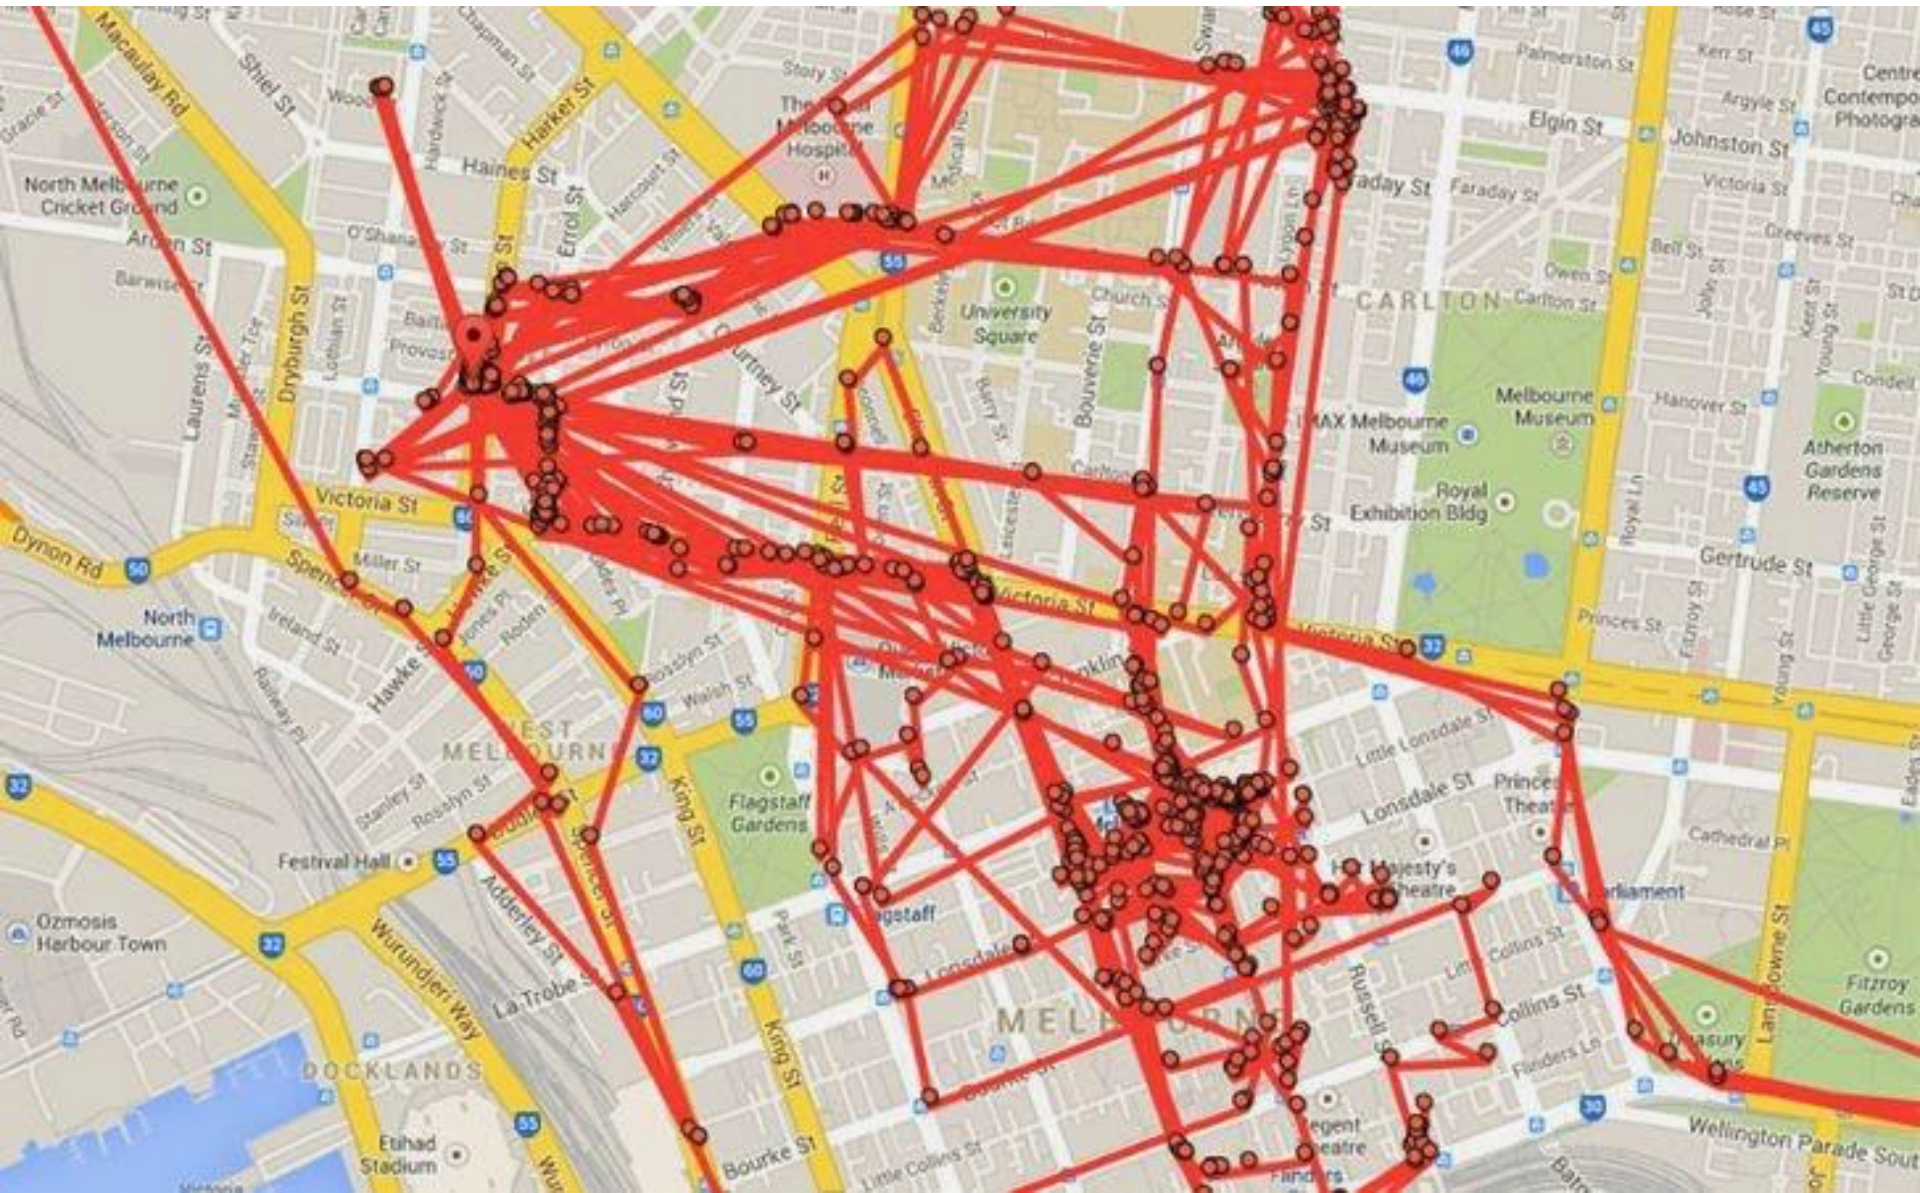

How helpful did you find this answer?

National Security, Militarism & Cyber Warfare

- According to the latest UK national security review, cyber warfare comes second only to international terrorism
- Takes the form of espionage and cyber attacks on government agencies, national corporations and core public utilities
- Now thought of as 'the fifth domain of warfare' (the other four being land, sea, air, and space)
- Countries with sophisticated cyber capabilities include: China, Russia, Israel, North Korea, Iran, France, Germany and the US
- UK government earmarked a further £500m (2010) to help the UK defend against the growing threat of cyber attacks over the next four years
- Moves towards intelligence-gathering and away from Army tank brigades and RAF jet squadrons that dominated defence strategy during the Cold War

Changing modes of governance

Foucault effect

- Foucault's theories of governmentality, panopticon, knowledge / power and 'docile bodies' can be applied to media.
- Bennett (1988) argues that modern power has shifted from surveillance to the 'exhibitionary complex' being public displays of power, voluntary self-regulation, transformation of the crowd from a 'spectacle of punishment' to a 'spectacle of knowledge' and cultural governance to a 'reformers science'

Class exercise

- Summarise key points / definitions from the key reading
- How can Foucault, and later interpretations of his theories be applied to:-
 - a. Social media
 - b. Reality television
 - c. Influencer culture
